

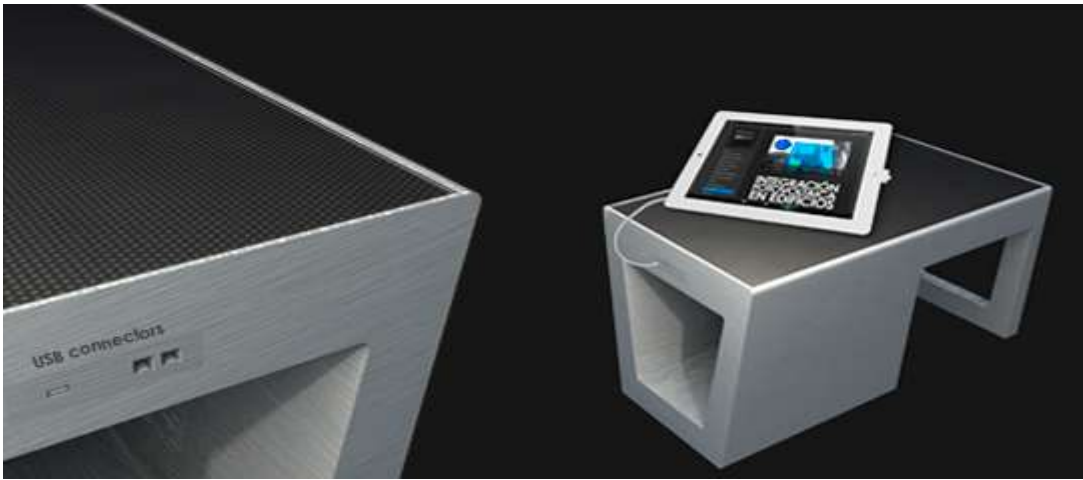

PHOTOVOLTAIC KIT FOR URBAN FURNITURE

Within the set of energy efficiency measures related to architecture and/or urbanism, Onyx Solar has developed an innovative solution, the **Photovoltaic Kit for Urban Furniture**. This solution has been developed as an autonomous power generation system to convert the traditional outdoor furniture into charging points for smartphones, tables, etc.

This kit consists of a photovoltaic glass in amorphous silicon (α -Si) and a solar micro-station (battery and USB connector). It can be integrated into different types of urban furniture such as benches, tables, canopies or any other outdoor furniture converting it into an **active element that generates clean free energy from the Sun**.

Our photovoltaic glass can be integrated into a functional and aesthetical way with a modern and technological design. This kit is available in different sizes and colors and in addition, it prevents the emission of CO₂ into the atmosphere.
